

## Small HOW System myMix stand alone

### 5 stereo mixes for monitor 1 main mix for the house pa

In this set up myMix is used without the need of a main mixing console. It is ideal for smaller places that have no FOH mix position and sound engineer, but also for small portable set ups, or in a youth room.

Keyboards, guitar-pod, bass-DI, metronome and three vocal mics are connected to the myMix inputs. For the drum set a small sub mixer is used to create a stereo mix of the drum kit (in many cases just a kick drum mic and a snare mic are sufficient).

The myMix that is used to create the house pa mix has a microphone for speech and a file player for other music sources. Songs can also be played back from an SD card.

The 4-band fully parametric EQ in the output is used to adjust the house pa system.
