

1. If a unit has EVER had an unlock code applied, it will always accept firmware updates
2. Units that have never had an unlock code applied will prompt user for code. This code must be obtained from Movek
3. If a user applies an update, doesn't have a code they will need to flash the previous version of firmware on their unit
4. Popup for code will be the existing test entry widget used on other screens modified to not have cancel button and rename "Save" to be "Unlock"
